### QUE AUDIO ANNOUNCES MODERNIZED DA12 NOW SHIPPING – “WE’VE BEEN LISTENING”

Que Audio announces and delivers a newly developed DA12 Headworn Mic (formerly branded Da-Cappo). The DA12 has undergone several significant enhancements made possible through technological advancements in materials and manufacturing.

“The DA12 continues to be our best selling microphone since its introduction in 2008,” states Paul Heaton, Managing Director, Que Audio. “After rebranding our Da-Cappo product line to the Que Audio Performance Series last year, we looked closely at what we could do to improve the DA12. The water resistant condenser capsule remains untouched, providing the highly intelligible, full bandwidth, studio sound quality we’re known for. However, we recognized that new technologies available in both the material making and manufacturing processes would allow us to make certain very considerable improvements to the DA12, without affecting the current pricing structure.”

“**We listened carefully to our customers,**” adds Mark Ludmer, CEO - Que Audio USA. “The DA12 has been known not only for its supreme sound quality, but for its exceptionally comfortable fit. You forget you’re even wearing a microphone. The DA12 is also well known for its ability to stay in place, even with rigorous physical motion. It was of paramount importance for us to improve on all of these features as well. And we do still offer the smaller child (Petite) size, as requested by so many.”

**Enhancements** to the DA12 include **a slight tapering of the ear cushion in all the right places for superior comfort and hold on either the left or right ear.** A **higher-density moveable boom-arm** brings greater **durability and flexibility** during positioning while maximizing audio performance. A **heavy-duty stretch cable** made with materials from an innovative Thermoplastic process delivers **better reliability.** The **Q Logo is now embossed on each side of the ear cushion** for easy recognition. **Newly manufactured high quality connectors** (sold separately) are now available for more wireless belt packs including Shure, Sennheiser, AT, AKG, Lectrosonics, EV, and more. An XLR phantom powered connector is also available.

The DA12 is available in beige or black, in standard size, and also in widely used Petite (child-sized) models, and packaged with a 1.8-meter cable (1800mm), (2) windscreens, tie clip, and zip-pouch.

Also available from Que Audio is the DA04 Lavalier Microphone, utilizing the same 2.5mm capsule and connection system as the DA12, delivering an extremely small and easy to conceal micro mic to audio professionals in Broadcast, Film, Presentation, and Theatre applications.
